

Service Architecture

Baltic Expeditious is our premier hybrid connectivity solution, engineered to circumvent long-lead infrastructure delays. By deploying a carrier-grade wireless leased line within 5 working days, we provide an immediate high-speed bridge that remains live until your permanent physical fibre is seamlessly integrated.

Technical Parameters

Primary Hand-off:	Standard RJ45 Ethernet or SFP Fibre interface tailored to on-site hardware.
Initial Deployment:	High-capacity symmetric wireless leased line active within 5 working days.
Fibre Integration:	Physical fibre infrastructure typically provisioned and live within 35 days.
IP Configuration:	Static IPv4 as standard. Network configuration persists during the fibre switch.
SLA / Reliability:	99.95% uptime guarantee backed by UK-based proactive 24/7 monitoring.
Bandwidth:	Scalable multi-gigabit symmetric speeds available across our national backbone.
Network Core:	Private, non-contended network infrastructure owned and managed by Baltic.
Resilience:	Wireless link can be retained as a secondary 100Mbps backup for failover.

STRATEGIC ADVANTAGE: Baltic Expeditious removes the infrastructure lead-time variable from your project timeline, ensuring your business is online and operational according to your schedule, not the provider's.
